

Assignment 03

Pbm 1

Blood glucose levels for obese patients have a mean of 100 with standard deviation of 15. A researcher thinks that a diet high in raw cornstarch will have a positive effect on blood glucose levels. A sample of 36 patients who have tried the raw cornstarch diet have a mean glucose level of 108. Test the hypothesis that the raw cornstarch had an effect or not.

$$\mu = 100$$

$$\sigma = 15$$

$$n = 36$$

$$\bar{x} = 108$$

H_0 : Raw cornstarch diet has an effect on obese patients

H_1 : Raw cornstarch diet has no effect on obese patients

$$Z_{\text{test}} = \frac{108 - 100}{SE}$$

$$SE = \frac{\sigma}{\sqrt{n}} = \frac{15}{\sqrt{36}} = 2.5$$

$$= \frac{8}{2.5} = \underline{\underline{3.2}}$$

$$\alpha/2 = 0.025$$

$$Z_{(0.025)} = \pm 1.96.$$

$$Z_{\text{test}} > +1.96.$$

We can reject the null hypothesis

Pbm 2

In one state, 52% of the voters are Republicans, and 48% are Democrats. In a second state, 47% of the voters are Republicans, and 53% are Democrats. Suppose a simple random sample of 100 voters are surveyed from each state.

What is the probability that the survey will show a greater percentage of Republican voters in the second state than in the first state?

P_1 = Population proportion of republicans in state 1

P_2 = Population proportion of republicans in state 2.

p_1 = Sample proportion of state 1

p_2 = Sample proportion of state 2.

$n_1 = 100$ Sample size of sample 1

$n_2 = 100$ Sample size of sample 2.

$$\sigma_d = \sigma(P_1 - P_2)$$

$$= \sqrt{\frac{P_1(1-P_1)}{n_1} + \frac{P_2(1-P_2)}{n_2}}$$

$$Z_{\text{test}} = \frac{X - \mu_{P_1 - P_2}}{\sigma_d}$$

$$\begin{aligned}\mu_{(P_1 - P_2)} &= P_1 - P_2 \\ &= 0.52 - 0.47 \\ &= \underline{\underline{0.05}}\end{aligned}$$

$$\sigma_d = \sqrt{\frac{0.52(0.48)}{100} + \frac{0.47 \times 0.53}{100}}$$

$$= \sqrt{0.004987} = \underline{\underline{0.0706}}$$

$$\begin{aligned}Z_{P_1 - P_2} &= \frac{0 - 0.05}{0.0706} \\ &= \underline{\underline{-0.71}}\end{aligned}$$

Find the prob: of Z_{score} being -0.7086 or less is

$$\underline{\underline{0.24}} \quad (0.2389)$$

Pbm 3

You take the SAT and score 1100. The mean score for the SAT is 1026 and the standard deviation is 209. How well did you score on the test compared to the average test taker.

$$\text{Score} = 1100$$

$$\bar{x} = 1026$$

$$\sigma = 209$$

$$Z = \frac{X - \mu}{\sigma} = \frac{1100 - 1026}{209}$$

$$= 0.354$$

$$Z\text{value} = 0.6368 = \underline{\underline{63.68\%}}$$

My score is on 0.354. i.e., 63.68%. students have scored less than me. 36.82% students have scored greater than me.
